Charles,

I wanted to take a moment to thank you for the incredible job your team did on the Carpenter-Haygood Stadium turf project. We still cannot believe the project was completed in 22 working days.

Since the field was completed we have had record rain falls and tornadoes have ravaged our area. We had a 5" rainfall in just under two hours and that was followed by 7" rain storm in just over three hours. Our stadium field has never had adequate drainage and to witness these types of storms and not have any water on our field at any time during these storms is completely amazing. The drainage technology installed here is absolutely the best I have ever seen and I can say prior to this construction these same storms would have devastated our field and made it unusable.

The project was a huge success and we could not be happier with the turf. You can see no infill and there is absolutely no rubber pellets moving around on the field. The coaching staff and players are very excited about the new possibilities the field gives them from a recruiting and practice standpoint.

Thank you again for the efforts you took to make sure this project was completed to the highest standards. Please have anyone interested in your company call me directly if they have any questions about the products or your company.

Sincerely,

T. Kale Gober
