Charles,

We had a great season on our field and are about to get going in spring football. I can't tell you how much this field has helped in the development of our program and the overall participation of our kids. It has been a bright spot on campus and has given our students a facility to be proud of and something that they have looked forward to being a part of every day.

The look, the feel, the footing and the drainage just couldn't be better. We have never missed a day no matter how much rain we have gotten or are scheduled to get. I know other areas schools have limited outdoor participation this time of year due to all of the rain but that is something that we never even think about anymore.

Our track guys love the GeoTrax runways in the D zone. It allows us to use that area for more than just track events. We are all very happy we elected to get rid of the asphalt and install this. It opens the facility up and gives us an extra area for football and baseball drills.

We couldn't be happier with the job you and your guys did and we hope to install new lights on the football field before this coming fall. If you ever need me to make a call or take a call from a perspective client feel free to share my cell number.

Thanks again for everything and for making our installation a smooth event. You guys are the best at what you do.

Sincerely,

Vince Perrin
Athletic Director/Head Football Coach
