Re: Woodward Academy Synthetic Field

Charles,

We have recently completed the 22 million dollar Athletic Complex at Woodward Academy and I wanted to take time to thank you for an outstanding job on the athletic field. We worked with several sub-contractors on this and other projects and I have to say your team was one of the best. We appreciate the way your guys handled the time crunch we were in and the way you were able to come through to help us meet the time restraints on your phase of the project.

The staff at Woodward was extremely happy with not only the incredible field but also the manner at which you attacked all of the challenges with this particular project and jobsite. The field itself has lived up to the play characteristics you promised. No visible or moving infill is present on the field and the drainage is outstanding. At first, I was unsure of how the GeoFlo drainage blanket would perform but now that I have witnessed the results I'm not sure if I would ever consider installing anything else under a synthetic playing surface. At one point this season, Woodward had the only field in a 10 mile radius that remained playable through all of the record rainfall. Even in the highest storm intensities not a single puddle or splash was present and Woodward never cancelled a scheduled event due to rain.

Again, thanks for a job well done and if we are ever contacted in the future about the construction of a synthetic turf field you will be the first person I call. Feel free to give my contact information to any prospective client that needs information about your products. Please let me know if I can ever be used as a reference or make a phone call on behalf of you or your company.

Sincerely,

Brian Smallwood LEED® AP
Project Manager
