Baton Rouge, LA 70817

Mr. Dawson,

I want to personally thank you for the exceptional execution of the 210,000 square feet of GeoFlo and GeoGreen sports surfacing that you installed for us at the Eagle River High School and Muldoon Area Middle School in Anchorage, AK. The professionalism and attention to detail exhibited by your project manager, Ray Fritz, exceeded our expectations.

Your system has already been exposed to a range of temperatures (90° to sub-zero) and functioned exactly as your design predicted. None of the negatives that were constantly voiced to us by your competitors in reference to the GeoFlo and its ability to function in our extreme climatic conditions are valid. The grade stability and drainage performance are obviously superior to any other field that we have constructed or been associated with in Alaska.

We are also pleased that your claims of "no flyout" and infill stability were not just sales-talk. The rubber pellets are invisible on the GeoGreen surface and have not exhibited the infill problems we have seen on other recently constructed projects, by other turf companies.

We hope to have the opportunity to work with the GeoSurfaces team again on upcoming projects. Thanks again for a job well done.

Regards,

Michael I Shaw
Project Manager
