5/15/2010

Charles,

I wanted to let you know of our satisfaction with all aspects of the installation process and the actual use of our field. The job your guys were able to complete in such a timely manner here was truly remarkable. I know construction has ups and downs, but we never expected for you to be able to turn our field over to us 45 days early. We are so pleased with our field and really are astonished as to its performance. Our coaches and most importantly our players just love it. I always thought most of these types of fields were similar, but after using our field and looking more critically at others, I know they are not all created equal. Ours is the best we have seen. The comments from opposing teams and coaches solidifies our opinion we bought the right field.

Just as you said, we have absolutely no visible or moving infill, our surface temperatures have not been a factor and the drainage is simply unbelievable. Like most of the country, we went through one of the rainiest seasons in memory and never had a single occurrence of water on our field. The GeoFlo drainage mat has worked exactly as you said it would and we could not be happier with its performance.

We are hoping to complete another artificial turf project on our campus in the near future and when we do you will be hearing from us. We also welcome you to bring anyone to our facility or have anyone call me directly should they have any questions or would like to schedule a site visit.

Again, thanks for a spectacular job, we feel like we have the best field possible and wouldn't change a thing. You will be hearing from us in the near future.

Sincerely,

David Thompson
