

TIME TO PIVOT®

Designed without the need for performance infill, **Pivot Performance Turf** provides the precise amount of feedback and support, give and grip and won't be outperformed—with the exception of the incredible athletes that play on it.

Developed at **TenCate's Center for Turf Innovation (CTI)** with college and professional athletes, Pivot was purpose-built for high-performance play. With over 50 iterations rapidly prototyped in response to testing data, it blends traditional sports fibers with advanced, thinner fibers that look and feel more like natural grass

200%
more fiber
than competitive
turf systems.

RICE UNIVERSITY STADIUM
Houston, TX

PRAIRIE GROVE HIGH SCHOOL
Prairie Grove, AR

MULTI-SPORT & ALL-WEATHER, PIVOT IS READY TO PLAY 24/7/365.

PILE WEIGHT	90 oz./yd2, 100 oz./yd2, or 120 oz./yd2	
PILE HEIGHT	1.125", 1.375", or 1.5" (+/- 1/8")	
TURF FIBERS	100% polyethylene yarn, XP+ Bi-axial, semi-TXT, TXT monofilament flex	
PIVOT COOL	2.5 lbs./SF (+/- .5 lbs)	

PIVOT PERFORMANCE TURF FIBERS

Pivot Performance Turf uses a blend of ultra durable XP+ bi-axial fiber, combined with TenCate's semi-texturized and texturized monofilament fibers. This reinforced, multi-directional system provides traction and stability while maintaining underfoot softness.

PIVOT® COOL

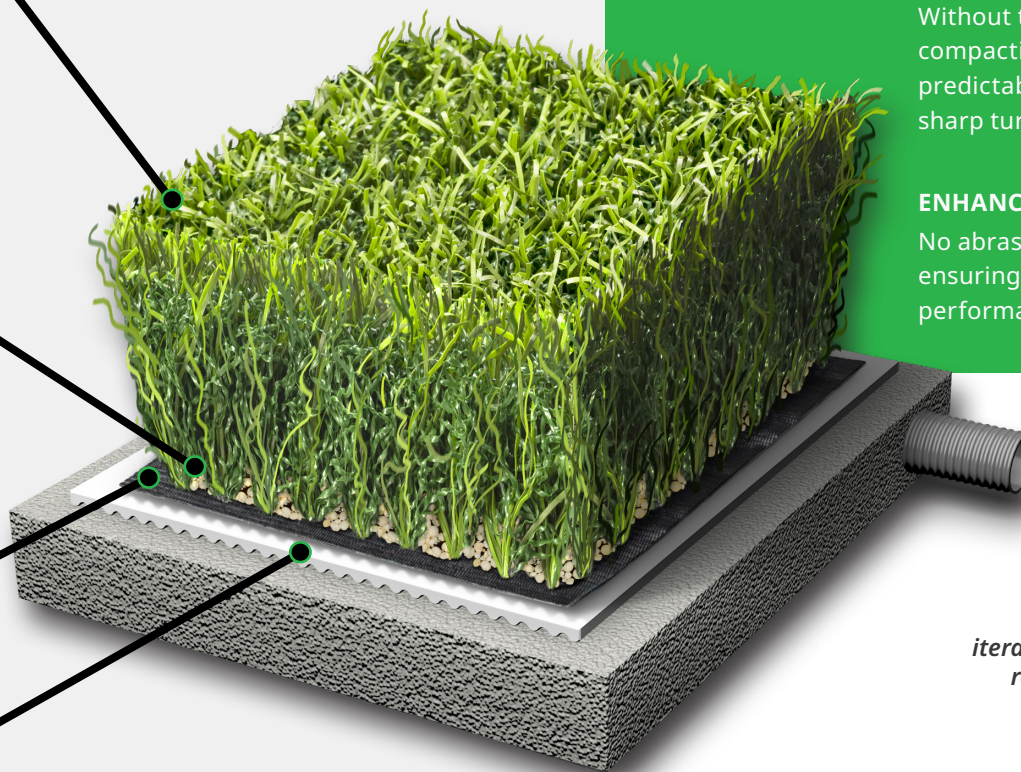

Pivot Cool is a precision-engineered, low-volume subsurface layer designed for use with Pivot performance sports turf. Positioned between the primary backing and the thatch layer, it provides surface cooling and environmental stability while enhancing the dynamic load capabilities of the surface. It was developed as an integrated part of the Pivot system.

K29 BACKING

The fibers are tufted into a multi-layer warp-knitted durable backing.

MAXFLO+

MaxFlo+ is a highly resilient expanded polypropylene shock pad for uniform shock attenuation.

IT'S NOT TURF. IT'S PIVOT.

CONSISTENT PLAY

Without traditional infill shifting or compacting, Pivot provides a stable, predictable surface—ideal for fast sprints, sharp turns, and uniform ball roll.

ENHANCED DURABILITY

No abrasive infill means fibers stay intact, ensuring the field maintains its high-performance quality season after season.

12
year warranty
